Literature and additional materials

Books

Two books that you can refer to for additional reading:

- An Introduction to Statistical Learning, G.James, D.Witten, T.Hastie, R.Tibshirani - https://www.statlearning.com/
- Probabilistic Machine Learning: An Introduction, K.P.Murphy - https://probml.github.io/pml-book/book1.html

Note! We are not following a single book, so not each topic will be covered, and the level of detail will differ.

Additional sources

- Welch Labs and 3Blue1Brown YouTube channels – for great visualizations and more 'imaginative' explanations (this would be especially helpful for the Deep Learning class).
- ChatGPT, Claude, Copilot – use to clarify concepts. You can't fully rely on the models, but they work great for clarification purposes or reframing explanations, so that you can understand better.
